ANNUAL EMISSIONS REPORT FOR AIRCRAFT OPERATORS

Used for combined reporting under the EU ETS, the Swiss ETS and ICAO CORSIA

CONTENTS

0.1	idelin	00 0	nd a	anditi	ono

- 1 Reporting year
- 2 Identification of the aircraft operator
- 3 Identification of the verifier
- 4 Information about the monitoring plan
- 5 Total emissions
- 6 Use of simplified procedures
- 7 Approach for data gaps
- 8 Detailed emissions data EU ETS
- 8b Detailed emissions data CH ETS
- 9 Aircraft data
- 10 Member State specific further information
- 11 Annex: Emissions per aerodrome pair EU ETS and CH ETS
- 12 CORSIA emissions data

Reporting year:			
Information about this report: This Annual Emissions Report was submitted by: Unique Identifier of the aircraft operator (CRCO No.): Version number of this emission report Version number of the latest approved monitoring plan: This emission report is used for CORSIA:	"BULGARIAN AIR CH 27538 1 6 TRUE	IARTER"	
Total emissions of the aircraft operator from flights repor EU ETS: This is the amount of allowances to be surrendered by the aircraft operator.		11 959 igure should only include em	
reported under the EU ETS, i.e. relate to the reduced scope. Memo-Item: Total (sustainable) biomass emissions		0	t CO2
reported under the EU ETS, i.e. relate to the reduced scope.			
reported under the EU ETS, i.e. relate to the reduced scope. Memo-Item: Total (sustainable) biomass emissions Memo-Item: Total non-sustainable biomass emissions Total emissions of the aircraft operator from flights repor	table under the	0	t CO2
reported under the EU ETS, i.e. relate to the reduced scope. Memo-Item: Total (sustainable) biomass emissions Memo-Item: Total non-sustainable biomass emissions Total emissions of the aircraft operator from flights repor	table under the	0 0 as calculated in section 5(d).	t CO2

If your competent authority requires you to hand in a signed paper copy of the monitoring plan, please use the space below for signature:

Identification of the verifier

ecordance with Article 28a(6) of the EU ETS Directive, aircraft operators emitting less than 25 000 tonnes of CO2 per year, related to the full scope of the EU ETS, or emitting less than 3 000 tCO2 per year under the reduced scope, both commercial and non-commercial, can choose an alternative to verification by an

The alternative involves determining their emissions by using the small emitters tool approved under Commission Regulation No 606/2010. In such cases, data used for determining emissions must originate from Eurocontrol. As a result, aircraft operators taking advantage of this simpler method need to use data populated by Eurocontrol with data from its ETS support facility, without any modification.

Where small emitters make use of this simplification, this section can be left empty.

(a) Name and address of the verifier of your annual emission report

Company Name: Address Line 1: Address Line 2:

(c) Information about the verifier's accreditation:

Note that pursuant to Article 54(2) of the "AVIP" (Accreditation and Verification Regulation; Commission Implementing Regulation (EU) 2018/2067), a Member State may choose to entrust certification of natural persons as verifiers to a national authority other than the national accreditation body. In such cases, "accreditation" should be read as "certification", and "accreditation body" as "national authority".

Member State where accreditation has been granted: Registration number issued by the accreditation body: Czechia 3185

nation may depend on the accrediting Member State's practice of accreditation of verifiers

EMISSION DATA OVERVIEW

4 Information about the monitoring plan

Note: it is assumed, that one joint monitoring plan for the EU ETS, the CH ETS and CORSIA is used.

(a) Version number of the latest approved monitoring plan:

8

(b) Date of approval of the used monitoring plan:

22.8.2019

(c) Have there been any deviations from your approved monitoring plan during the reporting year?

FALSE

(d) If you have answered "True", please describe all relevant changes in the operations and all deviations from your approved monitoring plan, providing information about each deviation and the consequence for the calculation of annual emissions.

5 Total emissions in EU ETS and CH ETS

For limiting administrative burden, this sections (a) and (b) should cover emissions of both systems, EU ETS and CH ETS.

- (a) Total number of flights in the reporting year:
- (a).i Total number of flights in the reporting year covered by the EU ETS:
- (a).ii Total number of flights in the reporting year covered by the CH ETS:
- (a).iii Total number of flights in the reporting year covered by an ETS:

726

726

(b) Properties of the fuels used:

Please provide here the calculation factors needed for describing each fuel's properties for calculating the emissions. Input is required only if you are using other fuels than the standard fuels already defined. Please note:

The "preliminary EF"

The "preliminary emission factor" is the assumed total emission factor of a mixed fuel or material based on the total carbon content composed of biomass fraction and fossil fraction before multiplying it with the fossil fraction to result in the emission factor. For Aviation, the EF is usually reported as t CO2/t.

NCV
Net calorific value. Proxy data is to be reported for completeness purposes. In this template it is not used for emission calculation.

biomass
For fuels which contain biomass, compliance with the sustainability criteria pursuant to the RES Directive has to be demonstrated (see guidance document no. 2) in order to assign an emission factor of zero to the biomass. Please enter here the percentage of biomass (% of the carbon content) contained in the fuel, which is demonstrated to comply with the sustainability criteria. This amount is used for calculating the fossil and biomass emissions under point (c).

biomass Please enter here the percentage of biomass (% of the carbon content) contained in the fuel which cannot be demonstrated to comply content (non-sustainable) with the sustainability criteria. This biomass is treated like fossil material, i.e. it contributes to fossil emissions under point (c), but is also presented as a separate memo-item.

Note: If you use a biofuel or mixed fuel, for which the sustainability criteria are demonstrated only for a part of the annual used quantity, you have to define two different fuels here, one with sustainable biomass and one with non-sustainable biomass.

Fuel No.	Name of fuel	preliminary EF [t CO2 / t fuel]	NCV [GJ/t]	biomass content (sustainable) [%]	biomass content (non-
					sustainable) [%]
1	Jet kerosene (Jet A1 or Jet A)	3,15	44,10	0,00	0,00
2	Jet gasoline (Jet B)	3,10	44,30	0,00	0,00
3	Aviation gasoline (AvGas)	3,10	44,30	0,00	0,00

11					
12					

If required, you may add further fuels by inserting rows above this one. This is best done by inserting a copied row.

(b1) Further information on alternative fuels:

Please provide important information related to the biomass content of alternative fuels used here. Life cycle emissions should be calculated according to the methods provided by the Renewable Energy Directive (RED).

Note that here only biofuels used for EU ETS purposes are to be listed. "CORSIA eligible fuels", if applicable, are to be reported in section (12)(b1) of this template.

Fuel No.	Fuel type	Feedstock	Conversion process	Life cycle emissions

11				
12				

If required, you may add further fuels by inserting rows above this one. This is best done by inserting a copied row.

(c) Fuel consumption and emissions in the EU ETS

Here you have to enter the quantity of each fuel used in the reporting year (also referred to as "activity data"). The emissions and the biomass-related memo items are calculated automatically using the calculation factors defined under point (b).

(final) EF This is calculated from the preliminary emission factor and the sustainable biomass content (where the sustainable biomass content is zero-rated).

fuel consumption	Please enter here the total fuel consumption of each fuel in tonnes in the reporting year. Please note that this figure should only include fuel consumption to be reported under the EU ETS, i.e. relate to the reduced scope.
CO2 emissions [t CO2]	This is the amount of "fossil" emissions (including emissions from biomass for which no evidence for compliance with the sustainability criteria has been provided). It is identical to the emissions for which allowances are to be surrendered.
CO2 from sustainable biomass	This figure shows as a memo-item the emissions from sustainable biomass.
CO2 from non- sustainable biomass	This figure shows as a memo-item the emissions from non-sustainable biomass. Note that these emissions are part of the "fossil" emissions and do not need to be added once more.

Fuel No.	Name of fuel	(final) EF [t CO2 / t fuel]	fuel consumption [tonnes]	CO2 emissions [t CO2]	CO2 from sustainable biomass	CO2 from non- sustainable biomass
1	Jet kerosene (Jet A1 or Jet A)	3,15	3 796,57	11 959	0	0
2	Jet gasoline (Jet B)	3,10				
3	Aviation gasoline (AvGas)	3,10

11						
12						

If required, you may add further fuels by inserting rows above this one. This is best done by inserting a copied row. However, formulae will need corrections!

Total CO2 emissions (EU ETS) in the reporting year:

11 959

IMPORTANT NOTE: This total emissions figure is considered the correct figure for the annual emissions. If aggregation in the sheet "Emissions Data" or in the Annex deviates from this figure, make sure that the data in all tables is consistent.

This figure should only include emissions to be reported under the EU ETS, i.e. relate to the reduced scope.

Memo Item: Sustainable biomass:	0	
Memo Item: Non-sustainable biomass:		0

(d) Fuel consumption and emissions in the CH ETS

For instructions on filling this section see above under section (c).

Fuel No.	Name of fuel	(final) EF [t CO2 / t fuel]	fuel consumption [tonnes]	CO2 emissions [t CO2]	CO2 from sustainable biomass	CO2 from non- sustainable biomass
1	Jet kerosene (Jet A1 or Jet A)	3,15				
2	Jet gasoline (Jet B)	3,10				
3	Aviation gasoline (AvGas)	3,10

9						
10						
11						
12						

If required, you may add further fuels by inserting rows above this one. This is best done by inserting a copied row. However, formulae will need corrections!

Total CO2 emissions (CH ETS) in the reporting year:

0

IMPORTANT NOTE: This total emissions figure is considered the correct figure for the annual emissions. If aggregation in the sheet "Emissions Data" or in the Annex deviates from this figure, make sure that the data in all tables is consistent.

This figure should only include emissions to be reported under the CH ETS.

Memo Item: Sustainable biomass:	0	
Memo Item: Non-sustainable biomass:		0

6 Use of simplified procedures

 $For \ limiting \ administrative \ burden, this \ sections \ (a) \ to \ (f) \ should \ cover \ emissions \ of \ both \ systems, \ EU \ ETS \ and \ CH \ ETS.$

			C'- Lie This FEA	Small emitters are aircraft operators which operate fewer than 243 flights per period for three consecutive four month periods and aircraft operators with total annual emissions lower than 25,000 t/ CO2 per year, related to the EU ETS full scope.									
	Note that for the purposes of the EU ETS, the threshold applies to the sum of all flights within EEA, outgoing from EEA and incoming to EEA, including those												
	incoming from Switzerland. FALSE												
	Please report the total number of	full scope flights covered	by the EU ET	S in each four	-month period	d during the							
	reporting year for which you are the aircraft operator:												
The local time of departure of the flight determines in which four month period that flight shall be taken into account.													
	Four-month period	Number of flights											
	January to April												
	May to August												
	September to December

The table should be filled as follows:

THE IMPIE CHECKIO	of third do forest
Reference	Here the data gap should be specified, either by referencing the aircraft, aerodrome, flight numbers etc. for which the data gap occurred, and/or the start and end date of the period where the gap occurred.
Reason	Please describe here the reason why the data gap occurred.
Туре	Please describe here the type of data gap, such as "density measurement not available", "fuel uplift not available", "flights missing activity list", etc.
Replacement method	please indicate the method of determining surrogate data, by referencing the procedure in your monitoring plan, or by "small emitter too!" etc.
Emissions	Please give here the amount of emissions which are affected by the data gap. This figure must be INCLUDED in section 5 and/or section 12 depending on the type

Reference	Reason	Туре	Replacement method	Emissions
end	end	end	end	end

If required, you may add further rows above the "end" markers by inserting rows above this one. This is best done by inserting a copied row.

(b) Percentage of EU/CH ETS flights for which data gaps occurred (rounded to nearest 0.1%)

Percentage of international (CORSIA) flights for which data gaps occurred (rounded to nearest 0.1%) (c)

Note: If unclear in the table above, whether data gaps apply to EU ETS, CH ETS, CORSIA, or more than one data set, please add relevant information in the table, e.g. by specifying it in the "type" column.

EMISSION DATA PER COUNTRY AND FUEL - EU ETS

8 Detailed emissions data – EU ETS

(a) The following table is used for control purposes only. Please make sure that the totals are consistent with the result of section 5(c). The following sections (b) and (c) should be filled without any double counting of emissions.

Note: You can add more columns if you use more fuels, and more rows if you have to enter more country pairs. If you add additional cells, and/or copy and paste data from another program or worksheet, you have to add the appropriate calculation formulas and check the correctness of existing formulas. It is the full responsibility of the aircraft operator to check the correctness of calculations.

Note: Only fossil emissions are accounted for in this section. This includes biomass emissions for which sustainability criteria have not been proven.

			Emissio	ons from each Fuel	[t CO2]			
		Jet kerosene (jet A1 or jet A)	Jet gasoline (Jet B)	Aviation gasoline (AvGas)	Alternative fuel 1	<add fuels<br="" more="">before this column></add>	TOTAL [t CO2]	Total number of flights
Α	Total aggregated CO2 emissions from all flights relating to the reduced scope of the EU ETS Directive (= B + C)	11 959	0	0	0	0	11 959	726
В	of which departure MS is the same as arrival MS (domestic flights, =sum of section (b))	695	0	0	0	0	695	102
С	of which all other intra EEA flights	11 264	0	0	0	0	11 264	624
D	emissions from all flights departing from a Member State to another Member State (=sum of section (c))	11 264	0	0	0	0	11 264	624

Please note that all figures should only include emissions to be reported under the EU ETS, i.e. relate to the reduced scope.

Total emissions entered in section 5(c): Difference to data given in this sheet:

11 959 t CO2 -0 t CO2

(b) Aggregated CO2 emissions from all flights of which departure Member State is the same as arrival Member State (domestic flights):

Please complete the following table with the appropriate data for the reporting year. Note that the emission factors presented in section 5(b) MUST BE USED for calculating these emissions.

Annex: Emissions per aerodrome pair - EU ETS and CH ETS

11 Additional emissions data – EU ETS and CH ETS

For reducing administrative burden, this Annex should include both flights covered by the EU ETS and CH ETS

(a) Please indicate if the data in this annex is considered confidential:

FALSE

(b) Please provide the data (totals during the reporting period, related to the reduced scope) in the table below per aerodrome pair.

Please fill in the table below. If you need additional rows, please insert them above the "end of list" row. In that case the formula for the totals will work correctly.

Note that if you add additional cells, and/or copy and paste data from another program or worksheet, you have to check the correctness of existing formulae. It is the full responsibility of the aircraft operator to check the correctness of calculations.

Aerodrome Pair (use 4	-letter ICAO designator)	Total number of flights per aerodrome pair	Total emissions [t CO2]

Totals:		
	Total number of flights	Total emissions [t CO2]
Reporting year totals:	726	11 959
Compare data entered in section 5:	726	11 959

(12) CORSIA REPORTING

Note: This sheet only has to be filled if you have an obligation to report CORSIA-related emissions to your administering Member State. All flights falling under the scope of CORSIA have to be reported here. Where flights fall under both EU ETS and CORSIA, they have to be reported here as well as in the appropriate EU ETS-related sections of this template.

You can select here either to use the default emission factors required by EU ETS legislation, or the default values provided by the SARPs for CORSIA:

EU ETS

Note that for compliance with EU ETS legislation, "EU ETS" must be selected here (according to Article 3(1) of the Delegated Act pursuant to Article 28c of the EU ETS Directive, the values given in the MRR have to be used). The possibility to select "CORSIA" here is provided merely as an indicative tool for the aircraft operator to get an understanding of its emissions under CORSIA rules.

Explanation for the data below: Please complete the list underneath. All aerodrome pairs that were operated during the reporting year have to be reported. Note 1: Please report both directions between aerodrome pairs if applicable (A-B and B-A).

Note II: If you used different type of fuels on the same aerodrome pair with different fuel conversion factors, you need to create an identical aerodrome pair and report this portion of fuel separately. Please note, emissions from CORSIA eligible fuels are calculated with the fuel conversion factor(s) from corresponding aviation fuels.

Note III: Please also complete the CORSIA eligible fuels supplementary information to the Emissions Report. if CORSIA eligible fuels were used during the reporting period.

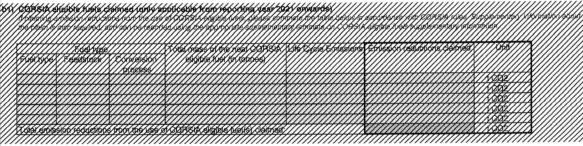

a) Summary of reported international flights and emissions

Total CO2 emissions from international flights (in tonnes):	13 058	t CO2
Total CO2 emissions from flights subject to offsetting requirements (in tonnes):	(//////////////////////////////////////	t CO2
Total number of international flights during reporting period:	738	
Total number of international flights subject to offsetting requirements:		
Total emissions reductions claimed from the use of CORSIA eligible fuels (in tonnes):		t CO2

Please note that the figures here are considered the relevant data determining the offsetting obligation under CORSIA. Therefore these figures are reflected also on the cover page of this report, and to be confirmed by the accredited verifier. For making sure that the figures here are not contradicted by the data below, they are automatically calculated here. However, if the list of flights is longer than in the original template, the formulae here have to be adjusted accordingly.

b) Summary of fuel quantities (in tonnes):

Jet-A	0,00 t
Jet-A1	4 145.49 t
Jet-B	0,00 t
AvGas	0,00 t

c) Table of all aerodrome pairs

Please list all aerodrome pairs on which international flights were performed, whether emissions were estimated using an emission estimation tool, the number of flights, the fuel type and the amount of fuel used. To determine if a route is subject to offsetting refer to the list of CORSIA States for Chapter 3 State Pairs: https://www.icao.int/environmental-protection/CORSIA/Pages/state-pairs.aspx

Departure		Arrival		CO2 emissions	Total No. of flights	Fuel type	Total amount of fuel used	Fuel conversion	CO2 emissions (in	Subject to offsetting
